“Here at Johnson Stock Farms, LLC we have used e-Beef OL for fall incoming calves 2 years now. We purchase calves in the 400-500# bracket that are trucked 100+ miles out of a neighboring state.

We mix the product with 2 1/2 gal. of water in a sprinkler can and add it to our vertical mixer while running.

We were delighted with the calf response to going on feed, overall health and improvement at our farm.

We will continue to use the product for future calves.”
