Menno and David Lengacher are part of an Amish community in central Michigan. Besides producing corn, oats and pumpkins, they also run a fairly large hog operation feeding out approximately 350 hogs, a dairy operation with 12—15 cows and they raise horses. These horses are critical not only to the operation of their farm, but as their transportation as well.

Some of their horses were having problems. They had become sluggish, experiencing loss of appetite and trouble maintaining normal weight. Nothing specific was wrong they just seemed “off”. Their local eCow Products sales representative, Tom Mackie, met with them to discuss our products for all of their animals and programs on how to use them.

They didn’t want to go overboard and jump right in, so they started small. Starting with 10 cc’s of eFoil P per horse every other day (a paste product designed as a nutritional supplement to provide some additional boost). Two weeks later, more paste was given. Seeing things “go to the right direction” with their horses, they started using eFoil P on a shaggy pony that they owned as well. The pony was “lethargic and not eating right”. It was given 5 cc’s of eFoil P for 6 days. All of the animals getting the paste product “perked right up and seemed to be doing great!”

The Lengacher’s were happy enough with the performance of the eFoil P that they started using our eDairy P product on their dairy cows. As well as many other eCow products on most of their other animals.

We at eCow Products, LLC are glad that we can work together to provide simple, economical solutions for your farm and your animals. Please contact your local eCow representative about our complete line of products for all animal species.

### eCow Products offer these advantages:

- Simplicity of application and use
- High quality ingredients
- Several products offer live and naturally occurring friendly flora with proven viability
- Various types contain proteinated trace minerals—enhances absorption rates
- Variety of products designed for specific stages in life and lactation
- Product components listed in various and widely accepted food/feed safety publications and listings
- Products can be fed throughout the animals life or at selected times
- Product contains no drugs
- Won’t negatively effect drug/vaccination therapies
- Cost effective
