## ePoultry Products

- Range of products designed for poultry.
- Liquid and dry supplements containing our proprietary whey product.
- Specially formulated
- Product contains no drugs.
- Product can be fed throughout the animals life or at selected times.
- Won't negatively effect drug/vaccination therapies.
- Cost effective.

Ed Waldner from Camrose Colony in Ledger, MT used ePoultry for 5-years. "I used it in flocks of 1000-1200 birds at a time. I started up with 1-1.5 lbs. of ePoultry WCT-1, dry feed product, per net ton of feed and ended up at .5 lb. in the feed as well as used ePoultry P in the water when needed. It also worked very well in overall growth. We usually grow the birds from 1-day to 8-weeks. The last couple of batches were growing too big, so I had to butcher them at 7-weeks." "The birds were averaging 5-5.7 lbs. The shell quality in the layer barn improved as well and went from 4.5-5% to .6-2.5% while using the product."

Ed ran two flock all under one roof (both pullets and layers) and faced a big challenge with bronchitis in the flocks. "We ran ePoultry in the water 3-days before vaccination and for 2-days after vaccination and we always had at least .5 lb. in the feed at all times. The percentage in layer production was up, better than without using the ePoultry. What I've seen is quicker results using the product than without."
